Abstract

In this article, the formation of the regional socio-economic policy based on the evaluation of labor potential was studied and a set of evaluative indicators of testing decisions, which are taken within the framework of regional management, for Pareto optimality was formed. The authors offered an integral index of efficiency of the socio-economic policy of a region in its function as the basic indicator of the evaluation of decisions taken at implementation of the socio-economic policy of a region. Finally, the mechanism of managing a region by means of implementation of the socio-economic policy based on the labor potential was formed. © IDOSI Publications, 2013.
